DETAILED ACTION

Double Patenting

1. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

2. Claims 61-82 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 11, 3-6, 30-35, 57 and 61 of U.S. Patent No. 5,691,789. Although the conflicting claims are not identical, they are not patentably distinct from each other because the instant claim of the present application is broader in scope than the patented claim.

As to claims 65 and 76, using a non-cross-linkable liquid crystal is common and known in the art and thus would have been obvious to avail a proven material.

As to claims 67 and 78, using a liquid crystal material that has at least one permanently attached chiral group is common and known in the art and thus would have been obvious to obtain a liquid crystal material that is more stable.

As to claims 68 and 79, using chiral material that is non-cross-linkable is common and known in the art for several reasons such as long term stability and thus would have been obvious.

As to claims 69 and 80, using a chiral material that is polymerizable is common and known in the art since polymerizable chiral is the most suitable for the preparation of cholesteric liquid crystalline polymers in a more stable manner and thus would have been obvious to obtain cholesteric liquid crystalline polymers in a more stable manner.

As to claims 70, 71, 81 and 82, chiral material having mesogenic groups or not is an obvious variation of forming chiral material and thus would have been obvious.
